

SAGAN Life®

ULTRAFLO 10™ UNDER SINK WATER FILTER KIT

If you ordered only the UltraFlo 10™ Filter to replace in an existing housing, please follow the manufacturer instructions for replacement for your specific housing. For replacing the filter in your Sagan Life® housing, please see below.

1. Remove the UltraFlo 10™ Filter from the protective covering.
2. Remove the Cap from the UltraFlo 10™ white plastic housing and insert the filter inside. Place the Cap back on the housing and tighten firmly.
3. Remove the two plastic Quick Connect fittings from the bag. Insert one Quick Connect fitting on each end of the Cap unit and tighten.
4. Attach the mounting bracket to the Cap with the included 4 screws.
5. Before installation, notice on the top of the Cap, each opening is labeled either IN or OUT. The IN side is where the water tubing is put for the water to enter the housing and the OUT side is the exit side for the filtered water tubing.
6. If needed, consult a certified plumber for installation. In many instances, the tubing used will already be located under the sink or location where this filter system will be installed. Cutting the tubing and using it with the UltraFlo 10™w Filter Kit may be necessary.
7. Filter Replacement - Depending on the volume of water passed through the filter, it should be replaced every 3 to 6 months.
