

CARE AND MAINTENANCE

Proper use, care and maintenance of the Filtration System Components will ensure their continued effective use to provide you with clean, purified water. When you are no longer going to be using the Filter System to dispense water from your storage container for more than a few days, detach the Filter System Components and store them away for future use.

Disconnect the Filter from the tubing. Allow the Filter to "air dry" for several days, then store it together with the other Filter System Components.

OTHER UNIQUE SAGAN™ WATER FILTER PRODUCTS

We have created a unique, effective line of water filtration products designed for use by outdoor enthusiasts and for emergency preparedness. Take a moment to check out our other products by going to our website www.saganlife.com. These are high quality products we are sure you will enjoy using.

Journey™ Filtered Water Bottle

24 oz. water bottle with the Journey™ Filter. Each filter is rated for providing up to 250 gallons of purified water. Easy to drink through bottle made of hard Tritan plastic with silicone center grip. You won't want to go traveling without it!

XStream™ Straw Water Filter

This 5 oz. Straw Filter will extend up to 4 ft. in length allowing you to access water conveniently. It is very easy to drink through. Each Filter will deliver up to 250 gallons of clean, great tasting water wherever you are. Great for use when --trekking, hunting, fishing, exploring, survival, emergency preparedness. Safe Water. Anywhere, Anytime.

AquaBrick™ Water Filtration System & AquaBrick™ Container

This unique air pressure filter system will deliver up to 700 gallons of purified water. It functions the same way as the Water Storage Container System. The AquaBrick™ Container holds 3 gallons of water. Makes any water taste great while at the same time removing bacteria, virus and cysts. Great for camping, RV outings and emergency preparedness when you need to leave and find water along the way. The AquaBrick™ Container is perfect for storing water or food items for long term storage.

NOTES			
*CFU means Colony Forming Unit which is one microorganism included the simultaneous dose of all three types of microorganisms			
Journey™ FILTER CYSTS (Giardia/ Cryptosporidium)	BACTERIA	99.9999%	450,000,000
	VIRUS	99.99%	300,000,000
		99.99%	40,000,000
		99.99%	
Average Total CFU* Volume of Contaminants with which the filter was challenged over the course of testing 250** gallons of water			
Sagan Journey™ Filter Removal Certification 250 gallons			
EPA Water Quality Standard Removal Criteria			
99.9999%			
99.99%			
99.95%			

saganlife.com & aquaveritas.org

The Sagan™ Journey™ Filter has been tested by an independent EPA/ISO certified laboratory to remove from water up to 99.9999% of Bacteria, up to 99.99% of Protozoan Cysts (Giardia/Cryptosporidium) and up to 99.99% of Virus for up to 250 gallons/946 liters.

The Journey™ Filter is "End of life" tested to deliver up to 250 gallons/946 liters of SafeWater which is free from microbial contaminants from any water source, excluding salt water. This means the filter was continuously challenged with the EPA prescribed amount of microorganism contaminants at regular 25 gallon intervals, until the water passing through the filter started showing signs of falling below the EPA water quality standards. See the chart below. A copy of the Filter Test Results is available at saganlife.com & aquaveritas.org

Sagan water purification products are uniquely designed and "End-of-Life" certified to give you the assurance they will meet your personal needs anytime, anywhere.

Our passion is to enhance and preserve life. We believe personal wellness is dependent upon access to pure, SafeWater. We preserve life and promote health and wellness by creating state-of-the-art water filtration products for everyday use, outdoor activities and for times of emergency. Our products are reliable, easy to use and promote personal wellness and self-reliance.

ABOUT SAGAN LIFE LLC

Thank you for purchasing the Aquadrum™ Water Filtration System. When it comes time to actually have to use the water you have stored, you will be well taken care of using the Journey™ Filter. It will give you purified, better tasting water.

AQUADrum™

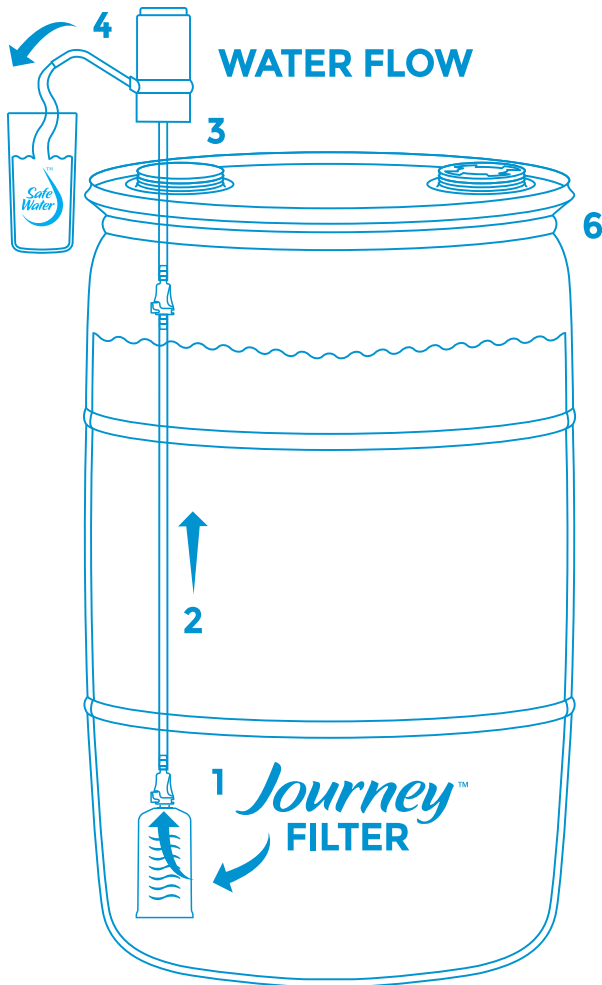

WATER FILTRATION SYSTEM

Everything we do is to enhance and preserve life. We believe personal wellness is dependent upon access to pure water

Congratulations on your purchase of your Sagan™ AquaDrum™ Water Filtration System. You now have the means to dispense water from your Water Storage Containers with ease. There are no moving parts to break. You will be able to easily dispense purified water when you need to use the water you have stored in your 55 gal., 30 gal., or any other water storage containers.

HOW IT WORKS

Using Power Plus Rechargeable Pump

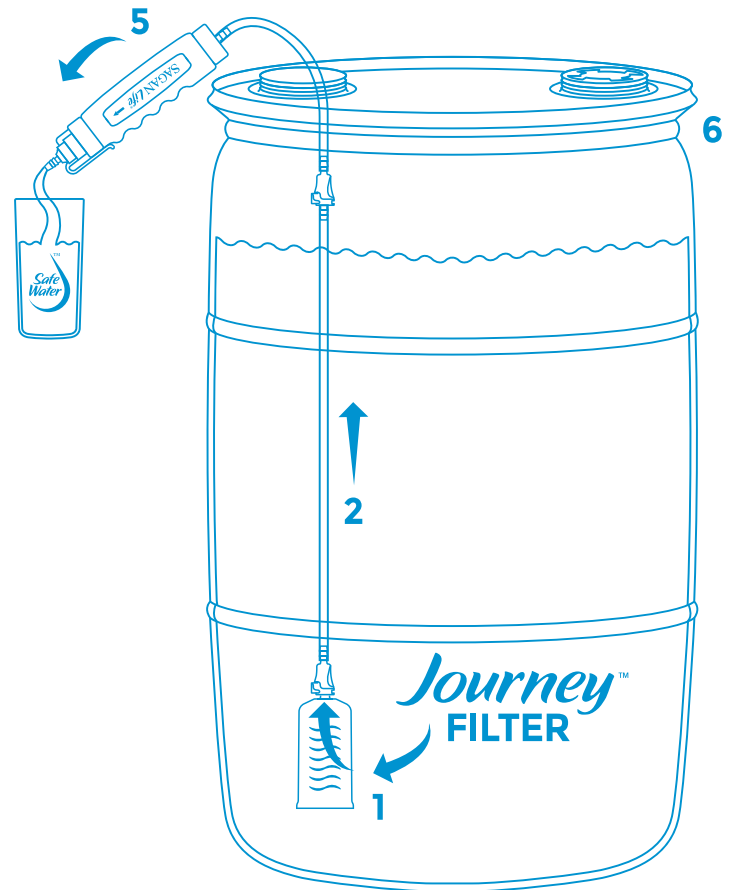

1. Journey™ Filter
2. Long Tubing with Quick Connect
3. Short Tubing
4. Power Plus Rechargeable Pump
5. Hand Pump
6. Water Barrel (Not included with kit)

HOW IT WORKS

Using Hand Pump

WATER FLOW

INSTRUCTIONS FOR USE

STEP 1.

Unwrap the filter and attach it to the quick connect end of the long tubing

STEP 2.

Attach the Hand Pump tubing to the long tubing using the quick connect end. To use the Power Plus Pump - connect the short tubing to the long tubing with the quick connect end, place the other end of the short tube into the underside of the Power Plus Pump in the center.

STEP 3.

Squeeze the hand pump several times to draw water through the filter and up the tubing and out the hand pump. It will take a couple of seconds for the hand pump to fill with water to be able to draw water again. If using the filter for the first time, discard the first cup of water drawn out. If using the Power Plus Pump, make sure the pump is charged, then press the on button. Water will automatically begin to be drawn up through the filter and out the spout of the pump. The pump may make more noise at the start and once water is being drawn through the pump the noise will reduce

STEP 4.

To ensure optimum maintenance of the filter and tubing, we recommend NOT TO LEAVE THE AQUADrum WATER FILTRATION SYSTEM INSIDE THE WATER DRUM FOR MORE THAN 4-5 DAYS AT A TIME.

For more information on how to assemble and use your Sagan™ AquaDrum™ Water Filtration System view the videos on the Sagan Life YouTube Channel or our website:
